

Children

The following patients should be referred very urgently, to be seen within 48 hours and recommended practice is to contact the on-call paediatrician rather than using the 2WW pathway.

Neuroblastoma

- palpable abdominal mass or unexplained enlarged abdominal organ

Wilms' tumour

- palpable abdominal mass unexplained visible haematuria
 an unexplained enlarged abdominal organ

Brain and central nervous system cancers

- newly abnormal cerebellar or other central neurological function (Red flag as recommended on <http://www.headsmart.org.uk>)

Hodgkin's & Non-Hodgkin's lymphoma

- unexplained lymphadenopathy unexplained splenomegaly

Soft Tissue Sarcoma

- Ultrasound scan findings that are suggestive of soft tissue sarcoma Proptosis

Leukaemia

- unexplained petechiae, pallor or hepatosplenomegaly

Bone sarcoma

- X-ray suggests the possibility of bone sarcoma

Retinoblastoma

- consider referring children with absent red reflex
